Invitation

Non communicable diseases (NCDs) are responsible for nearly 40 million deaths each year which represents almost 75% of all deaths worldwide. This includes deaths caused by injuries from motor vehicle accidents, and chronic diseases, such as cardiovascular disease, cancer, diabetes, and chronic respiratory diseases. NCD deaths worldwide now exceed all communicable, maternal and perinatal nutrition-related deaths combined, and represent an emerging global health threat. The majority of these deaths occur in low- and middle-income countries where the number of people affected by NCDs is growing and health systems are often not equipped to respond effectively. Symposium will be organized to create awareness regarding the most neglected aspects of NCD Control i.e. Life style changes in Indian Context and to create awareness among PG students of Community Medicine and Medicine.
